Semen testing and analysis (available Monday – Friday by appointment)

Comprehensive Semen Analysis with Kruger Strict Morphology..... \$185
 Includes volume, concentration, motility and morphology using Kruger strict criteria. We believe this test has the best correlation for predicting fertilization rates in vitro. It is also very helpful to determine which patients might benefit from IUI versus IVF procedures. Kruger strict morphology is used at RCC instead of the sperm penetration assay (SPA or HEPT) in order to predict fertilization capability and the need for ICSI. This is the initial test recommended by RCC physicians for evaluation of infertility.

Other tests are available depending on specific needs of the patient.

Reports are usually completed within 3 days of sample collection.

Semen testing must be scheduled in advance by calling 801-878-8888.

Intrauterine insemination related services for married couples (available 7 days per week)

Date services desired _____

- Semen preparation (husband's sample)..... \$160
 (includes basic semen parameter testing, prep, report, syringe and catheter)
- Donor sample preparation for IUI (IUI ready sample)..... \$98
 (includes semen thaw, basic semen parameter testing, report, syringe and catheter)
- Donor sample processing and preparation for IUI (intracervical insemination (ICI) sample) \$213
 (includes semen thaw, basic semen parameter testing, wash and preparation, report, syringe and catheter)
- Intrauterine insemination by RCC staff..... \$196

Samples can be prepared by RCC for insemination for insemination by RCC staff or by the ordering physician's staff.

Anticipated IUI procedures should be scheduled by calling 801-878-8888 by 2 pm prior to the day of insemination. Please review the clinical information with RCC nursing staff.

After hours, calls to the office will be referred through the answering service to the RCC physician on call.
